

**SafePoint**  
Token

# SafePoint Whitepaper

# WHAT YOU SHOULD KNOW ABOUT SAFEPOINT TOKEN

- ▶ SafePoint is building more than just a financial app it's creating an ecosystem where crypto meets everyday life. At the heart of this vision is SafePoint Token (SPT), the native coin that will power transactions, rewards, and community growth across the SafePoint platform.
- ▶ With SafePoint, users can do more than hold and send digital assets they'll be able to manage a multi-currency wallet (supporting SafePoint, Bitcoin, Wikicat, USDT, USDC, and even Naira), pay for utilities like airtime, electricity, and internet, book hotels and flights (both local and international), and even request SafeDrive all from one app.
- ▶ The beauty of SafePoint Token is that it ties this entire experience together. Every payment and booking made on the platform open up an opportunity to earn Back Points cashback rewards, redeemable for even more value within the ecosystem. Holding and using SPT won't just make transactions seamless it will also position users at the center of a growing Web3-powered lifestyle economy.
- ▶ Now, with the forthcoming presale of SafePoint Token, early adopters will have the chance to secure their stake before the token goes live on broader markets. This presale isn't just about acquiring a coin it's about being among the first to fuel and benefit from a platform that brings crypto utility directly into people's daily lives.
- ▶ SafePoint Token is more than a currency. It's a ticket into a world where financial services, travel, lifestyle, and rewards converge all powered by blockchain.

# ◆ TOKENOMICS
